

Google Bookmarks Location

Google Chrome bookmarks are stored in a hidden folder on Windows. Here's how you can locate the bookmarks store:

1. First, you will have to head into your Windows system drive.
2. Once inside, you will notice a "Users" folder. If you are the only user, you can just navigate your way to the folder with your username. For instance, my PC has only one user, so I opened up the folder "ANKUSH" (that's my system name). In case you have multiple users, you have to decide accordingly.
3. Now, you have to enable the option to view the hidden files
4. Once done, you just have to follow this storage path:

AppData\Local\Google\Chrome\User Data\Profile 1

You might observe the folder as "Default" or "Profile 1/2..." depending on the number of profiles on your Google Chrome browser.

5. Finally, inside this folder, you will find a file "Bookmarks" listed. That's the file you want. Copy it and paste it wherever you need to back that file up at.
